

**AMENDMENTS TO THE SPECIFICATION**

1. Please amend [0013] by adding the word "phases" at the end of the sentence as follows:

[0013] (c) providing a source of solid iron contact with either or both of the gas and liquid phases;

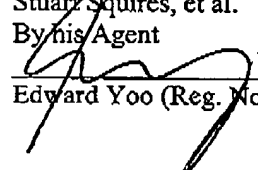

2. Please amend [0054] as follows:

[0054] In another embodiment, a vessel (410) having a reverse weir (412) is shown in Figure 4. In this embodiment, the baffles (430) may be hinged or flexibly attached to the tower (428) insert and means (440) provided for periodically flexing or moving the baffles. This periodic flexing of the baffles may assist in removing solids, which have encrusted onto the baffles. As seen in Figure 4, one example of a non-powered flexing means comprises a float (450) which floats on the liquid in the outlet chamber and which is connected to the baffles by a push rod (460). The fluctuation in the liquid level in the outlet chamber will cause the baffles to be moved up and down by the float (450) and push rod (460).

Please address all correspondence to Customer Number 22828.

Dated August 10, 2005.

Respectfully submitted,  
Stuart Squires, et al.  
By his Agent

  
Edward Yoo (Reg. No. 41,435)

**ATTACHMENTS:**

1. Copy of Notice of Non-compliant Amendment.
